Top: valid | correct out of 12. Require 12 valid, at least 11 correct, zero caps.
Bottom: valid out of 24. Require at least 23 valid, all 24 observed, zero caps.
Red × marks every failed cell, including cap failures that counts alone can hide. No failed arm is dropped.
Passing these observed-panel checks does not establish unchanged beliefs, confidence or psychological specificity.

All active arms: |dose| = one frozen C contrast norm (29.78968); signs label imposed semantic axes. Reused-world development; no inner-state inference.
