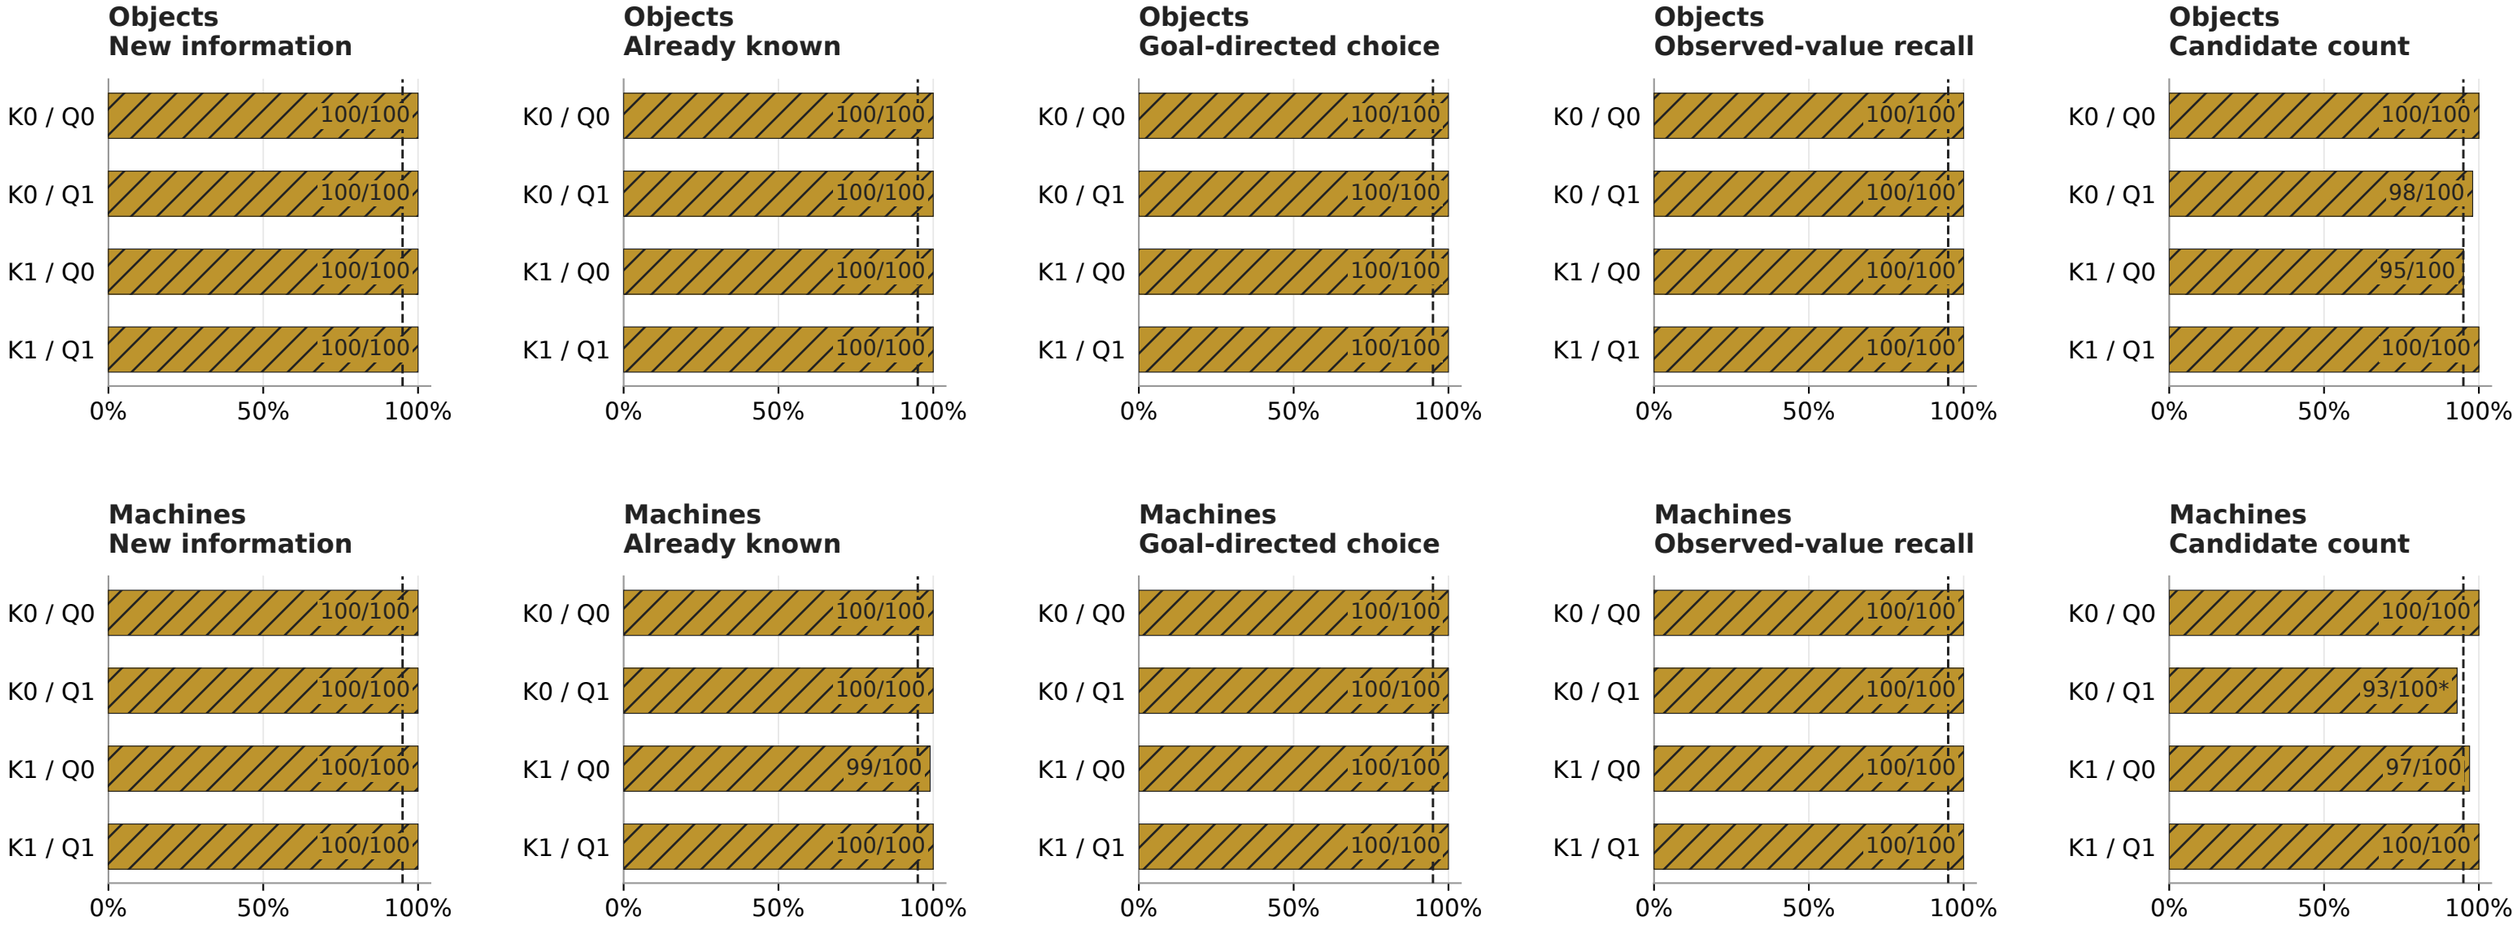
Final-answer validity by factorial condition

Qwen3-32B · 100 assigned items per cell · dashed line: frozen 95% gate · cells meeting this gate: 39/40



K = observed property; Q = queried property. Labels give exact counts out of 100 assigned responses. * Below the displayed gate.

The same 100 world indices per family recur across all four cells and five tasks; these responses are repeated measures. No confidence intervals are shown.

Overall frozen validation gate: not met. Validity requires a closed thinking block and a final answer in the requested format.
